› A Modular Approach

The Continental eBike System portfolio includes a variety of components divided into different categories such as displays, remote controls, drive units and batteries; enabling bicycle manufacturers to assemble the appropriate drive solution with the preferred range of functions.

› eBike Connectivity Solutions

With both a display featuring integrated Bluetooth 4.0 technology and the free Continental eBike App, you can connect your smartphone to your eBike and access several extra functions like navigation, weather information as well as system configuration adjustments.

› Full Service Concept

In addition to a philosophy of maintaining the highest quality and reliability standards as well as user and maintenance friendliness, we strive for close cooperation with our partner bicycle manufacturers and dealers. To enable the fastest possible response in the event of questions, the European Service Center near Frankfurt in Germany plays a key role.
